Hi dear Jaap

Long time ago I am modified Excel macro originally designed by AC6LA, for opening files recorded by PA1ARE analyser. Only what is necessary, is rename file recorded by PA1ARE software like ant.txt to ant.are. Change only extension to .are.

Excel macro is very useful analyzing tool. You can determine parameters of coaxial, measure antenna at the end of coaxial, and subtract this coax. You can see data which are at the antenna.
